SUMMARY

Electronics & Communications Engineering graduate with hands-on SOC experience. Skilled in SIEM (Splunk, IBM QRadar), log analysis, incident response, vulnerability management, playbook-driven workflows, plus basic digital forensics and threat intelligence, with solid Cisco networking and Wireshark expertise.

EDUCATION

B.Sc. in Electronics and Communications Engineering (2020-2025)

The Egyptian Academy for Engineering and Advanced Technology (EAEAT), Cairo, Egypt.

INTERNSHIPS

1. Cybersecurity Technologies and Operations – NTI

Offline (September 2025 – February 2026)

- Completed 420 hours of intensive, hands-on training in Network & System Administration, Cloud Security, SOC Operations, and Penetration Testing, with real-world attack simulations and advanced incident response.
- Leveraged industry-standard security tools and frameworks for threat detection, digital forensics, automation, and compliance-driven security operations.

2. Cybersecurity Superhero Academy – NTI

Online (August 2025)

- Hands-on training in Network & OS Security, Palo Alto Firewalls & VPNs, plus practical exposure to F5 (VLANs, Virtual Servers, iRules) and Trellix tools (EDR, XDR, NDR, DLP).

3. Information Security Analyst – DEPI

Hybrid (June – December 2025).

- Hands-on SOC operations, SIEM monitoring, and incident response, including a capstone project simulating real-world incident handling and escalation.

4. Cyber Operation Center – NTI

Online (April – May 2025)

- 72-hour SOC training focused on event correlation, threat detection, and incident triage using playbook-driven workflows.

5. CCNA Routing and Switching – NTI

Offline (September – November 2024)

- 120-hour hands-on CCNA labs covering VLANs, OSPF, EIGRP, ACLs, plus network simulation and troubleshooting with Packet Tracer.

6. Cloud Computing – NTI & Huawei Egyptian Talent Academy (ETA)

Offline (July 2024)

- Trained on cloud infrastructure fundamentals, virtualization, and Linux.
- Designed basic cloud architecture using Huawei Cloud tools.

PROJECTS

Graduation Project: Efficient IoT-Based Landscaping Irrigation Manager (IOT-ELIM)

- Developed AR-based autonomous navigation and sensor-driven irrigation system using Raspberry Pi & OpenCV, improving water efficiency.
- Presented at national competitions, secured 30,000 EGP funding, and received Excellent grade.

Penetration Testing Simulation & Detection Framework (PTS-DDF)

- Designed an end-to-end SOC lab simulating real-world Red Team attacks and Blue Team defenses. Leveraged Sysmon, Splunk, and FortiGate for real-time log analysis, threat detection, incident response, and threat hunting across Windows & Linux environments.

Automated Penetration Testing & Reporting Framework (APTRF)

- Developed an end-to-end Linux-based tool automating all phases of penetration testing: continuous domain recon (Python), port & vulnerability scanning (Nmap, Nikto), exploitation (Brute Force, File Upload, SQLi, XSS), and generation of comprehensive automated penetration testing reports.

Courses

- SANS SEC450 (Blue Team Fundamentals: Security Operations and Analysis)
- Cisco CyberOps
- SIEM Fundamentals (Splunk & QRadar)
- eLearnSecurity Certified Incident Responder (eCIR)
- CCNA Routing and Switching
- Linux Administration Fundamentals
- Windows Server Administration Fundamentals
- Cloud Computing Fundamentals

TECHNICAL SKILLS

- **SOC & Security:** Log analysis, incident response, threat detection, vulnerability management, playbook-driven workflows
- **SIEM & Tools:** Splunk, IBM QRadar, Wireshark, Nmap, TIP platforms
- **Networking & Systems:** TCP/IP, VLANs, Routing & Switching, Linux & Windows administration basics

LANGUAGES

- **Arabic:** Native
- **English:** Advanced (Professional Working Proficiency)
